

PHOTOGRAPHY CHEAT SHEET

APERTURE

Controls the size of the iris which in turn controls the light and blur. The lower the number the more light, and more background blur. The higher the number the less light and more in focus.

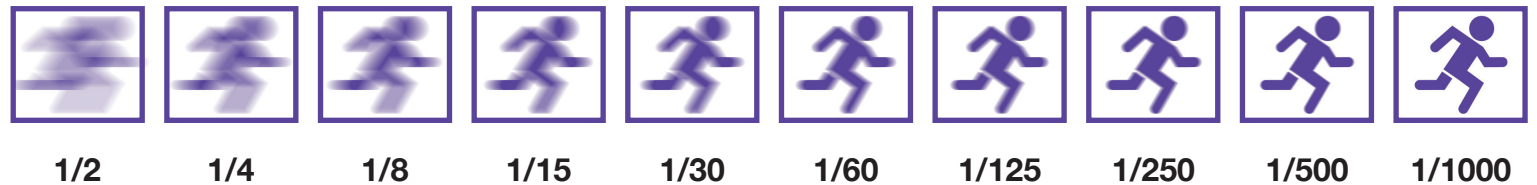

Large Aperture

Small Aperture

SHUTTER SPEED

Decides how fast you want the camera shutter to be open. Faster to freeze the action but will let less light in. Slower to add motion blur and will let more light in.

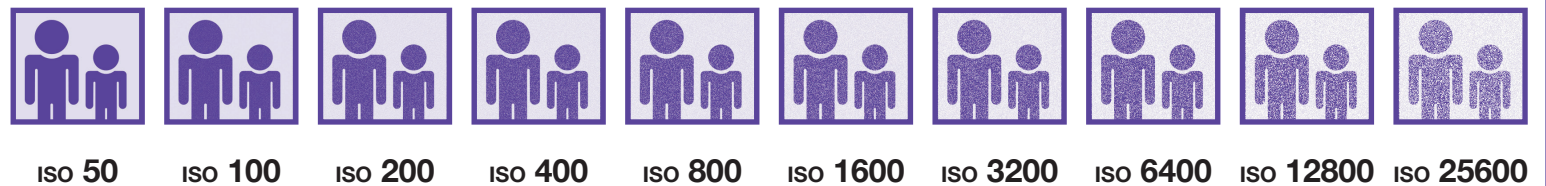

Slow Shutter Speed

Fast Shutter Speed

ISO

Sensitivity to light. The lower the number the cleaner, less noisy the image but will let less light on the sensor. The higher the number the more noise on the image, but will allow more light on the sensor.

Low Sensitivity

High Sensitivity
